

## Water for a Thirsty World: Cornell's Role in International Water

Tuesday, March 29

12-1:00pm – 300 Rice Hall

Hosted by:

Gail Holst-Warhaft (Near Eastern Studies) and

Tammo Steenhuis (Biological and Environmental Engineering)

Based on their collaboration in the classroom and in Greece, Tammo Steenhuis and Gail Holst-Warhaft will lead off a discussion on the need not only for an integrated, interdisciplinary approach to international water management, but for sharing ideas and approaches to water issues outside the US. The combined experience of a number of Cornell faculty who have worked all over the world on water issues could be of great benefit, we feel, to us all, and particularly to scholars new to international work. We would like to use the lunch as a means to explore the possibilities of forming a group initiative on international water. We will be targeting the faculty we already know who work in this area, but all those interested in discussing the issue are encouraged to attend and make suggestions for how we could better collaborate on international water research.
